

Math 1D.07Z and Math 1DH.07Z

Calculus
De Anza College
Fall 2020

Instructor: Dr. Jim Mailhot (pronounced MY-it)

e-Mail: mailhotjames@fhda.edu

Class Meetings: I will record lectures on the course material and make them available to you through Canvas. We will meet via Zoom (by way of a link in Canvas) on Tuesdays and Fridays from 10:30 to 11:20 am to discuss the course material and answer questions you may have.

Office Hours: I will conduct office hours via e-mail, Monday through Thursday, 9:00 – 9:50 pm. During office hours, I will respond to e-mail questions as promptly as I can. At other times, I will try to respond within 24 hours during the week and within 48 hours on the weekends.

Textbook: Either of the following:

- *Calculus Early Transcendentals*, 8th edition, by James Stewart
- *Calculus Early Transcendentals with Hyperbolic Functions* by James Stewart and Ron Larson. (This is the 8th edition of *Calculus Early Transcendentals* by Stewart, packaged together with a hyperbolic functions supplement by Ron Larson.)

Grading: Your grade in this course will be based on homework, in-class assignments, quizzes, two midterms and a comprehensive final exam, weighted as follows:

Homework and in-class assignments:	10%
Quizzes (lowest score dropped):	15%
3 Midterms:	15% each
Final Exam:	30%

Grade breakdowns are:

92.5% and above:	A
90 – 92.5%:	A–
87.5 – 90%:	B+
82.5 – 87.5%:	B
80 – 82.5%:	B–
77.5 – 80%:	C+
70 – 77.5%:	C
60 – 70%:	D
under 60%:	F

Homework: Homework problems from the sections we cover in class will be assigned and collected via Canvas, and will be graded on “completeness”. Make sure you upload your answers to the homework in a standard file format, with good enough resolution that I will be able to read your writing.

Quizzes and Exams: There will be three midterms and a comprehensive final exam. The midterms are tentatively scheduled for the 5th, 8th and 11th weeks of the quarter. In most other weeks there

will be a quiz (exceptions: the 1st week and Thanksgiving week). Your lowest quiz score will be dropped. All of the quizzes and exams will be taken asynchronously, via Canvas.

Extra Credit? No.

Cheating Policy: Don't be a cheater. Any student caught cheating on a quiz or an exam will receive zero points on that quiz or exam, and will be reported to the Office of Student Development. The same holds for any student who allows another student to cheat.

Be courteous to your fellow students. Follow good etiquette during Zoom meetings. Anyone who repeatedly disrupts the class may be kicked out of meetings.

College Policies:

- Students *can not* take the same class more than three times for a grade, *including W*.
- Late adds and late drops *will not* be processed.

Honors: An Honors cohort is being offered in this section. If you are in the Honors Program you are welcome to participate in the cohort. Please e-mail me if you are interested in taking this class as an Honors class. The Honors cohort entails additional work and you will earn an Honors designation for this class on your transcript. Once you commit to the Honors portion, you will be expected to complete the extra work. Failure to complete the Honors work will result in a lowering of your course grade.

If you are not a member of the Honors Program but think you may be eligible to join, and want to take this class as an Honors class, please e-mail me.

Important Dates:

Saturday, October 3 – Last day to add

Sunday, October 4 – Last day to drop with no record

Wednesday, November 11 – Veterans' Day (holiday)

Friday, November 13 – Last day to drop with a 'W'

Thursday, November 26 and Friday, November 27 – Thanksgiving (holiday)

Friday, December 4 – Last class meeting

December 7-11 – Finals Week

Student Learning Outcome(s):

- *Graphically and analytically synthesize and apply multivariable and vector-valued functions and their derivatives, using correct notation and mathematical precision.
- *Use double, triple and line integrals in applications, including Green's Theorem, Stokes' Theorem and Divergence Theorem.
- *Synthesize the key concepts of differential, integral and multivariate calculus.
