

# Physics 50 Winter 2019

|                    |  |
|--------------------|--|
| Section            | PHYS-D050-61 CRN: 02086                                      |
| Lecture Instructor | Lana Sheridan  |
| Email              | sheridanlana@fhda.edu  |
| Office             | S13  |
| Office Hours       | Tu & Th 4:45-5:15pm  |
| Lecture Hours      | Tu & Th, 5:30-7:20pm   |
| Textbook           | Physics, 4th ed, James S. Walker                             |
| Prerequisites      | Advisory: Mathematics 43 and Physics 10.                     |
| Final Exam Date    | Tuesday, Dec 10, 6:15-8:15 pm (confirm on De Anza's website) |

## Topics

This course introduces Newtonian Classical Mechanics without calculus. Students should leave this course with an understanding of how to make mathematical models of systems of interest and then apply basic Newtonian principles to discover how these systems behave. This sort of quantitative reasoning is useful not only for understanding the physical world we see around us, but also in any technical field including engineering and computer science. We will cover kinematics, which is motion of objects in 1 and 2 dimensions with some knowledge of their accelerations and other quantities, but without regard to forces acting on them. This will include projectile motion, circular motion, and relative motion. We will also cover dynamics, which determines the motion of objects by reasoning about forces acting on them, using Newton's laws, study different types of forces, and introduce work, energy, and power. The goal of this course is to prepare students to take Physics 4A, if they so choose.

## Attendance

In order to comply with federal guidelines De Anza College requires students to attend class and class attendance records to be kept. A student may miss a few classes for medical or personal reasons, however, unexplained absence of more than 2 consecutive days or frequent absence may result in a student being dropped from the course. Late arrivals count as absences at my discretion.

## Homework

From time to time there will be worksheets set for homework or other assignments that will count towards your grade.

If you are absent on the day homework is due, you must scan and email the homework to me by no later than 2 hours after the class. You must then bring a hard copy of your homework the next day. If you have an issue that prevents you from finishing a piece of homework on time, you must talk to me or email me about it at as soon as you realize it and least 1 day prior to the due date. I will consider each request on a case-by-case basis. Late homework will be accepted only at my discretion and if accepted the final score will be penalized if there was no prior approval.

The homework set from the book will not be collected or count towards your grade, however, it is very important to do this homework as part of your study! This will make concrete the ideas discussed in the lectures by allowing you to apply them immediately. I will try to set almost exclusively problems that have answers in the back of the textbook. If you have difficulty with the homework you can come to office hours, ask me just before or after a lecture, work together with other students, or go to the Math and Science Tutorial Center (Student Success Center). Doing these problems will help you prepare for the tests and quizzes.

The set problems should not be viewed as the only problems you can do: you are strongly encouraged to look through all of the problems at the end of each chapter and consider how each should be approached. **You should read the textbook and make notes from it.**

## Quizzes

Most weeks there will be at least 1 quiz on the material covered in the lectures. The quiz questions will usually be based on homework questions or problems discussed in class. There will be no make-up quizzes, however, each student's lowest quiz score will be dropped. Make sure you do the homework, so you can do well on the quizzes!

## Tests

There will be two midterm tests set in class time, in addition to the final exam, and there will be no make-up tests. In order to do well on the tests, read the textbook, and do the homework problems.

**Note:** If there is any dispute about marking, I will consider it only within two school days of the paper being returned to you. Grades for the final exam are final and not subject to dispute.

## Cheating

In the case that a student is found to be cheating on a piece of work or test, the grade for that will be zero. Plagiarism, which includes copying answers found on the internet, is cheating. You are encouraged to use resources you find online, but you must write up answers on your own, in your own style, and you must understand what you are writing.

## Evaluation

|              |                |
|--------------|----------------|
| quizzes & HW | 30%            |
| midterms     | 40% (20% each) |
| final        | 30%            |

Projected Grading Scheme:

|            |    |
|------------|----|
| 95% → 100% | A+ |
| 88% → 94%  | A  |
| 86% → 87%  | A- |
| 84% → 85%  | B+ |
| 75% → 83%  | B  |
| 73% → 74%  | B- |
| 71% → 72%  | C+ |
| 61% → 70%  | C  |
| 51% → 60%  | D  |
| 0% → 50%   | F  |

**Student Learning Outcome(s):**

\*Critically examine new, previously un-encountered problems, analyzing and evaluating their constituent parts, to construct and explain a logical solution utilizing, and based upon, the fundamental laws of mechanics.
